Flexibility for Tomorrow's Health Records

— Comprehensive remote coding services, audits & quality analytics for optimized business informatics.

FutureNet's remote coding services are a cost effective option for your local coder shortage and/or ICD-10 transition efforts. Seamless to your operation, either as overflow support or a fully outsourced business function, our inpatient coding and auditing services ensure that your records are thoroughly and accurately coded within your targeted processing cycles.

Our service team has experience with multiple industry coding platforms and are happy to work within your applications through secure VPN connections linked to our state of the art production centers.

Supported through our own SSAE 16 audited data center infrastructure, confidentiality is ensured and PHI is protected.
